

PBMC Cancer Registry 2007

The Penobscot Bay Medical Center (PBMC) Cancer Registry provides data management services to comply with the National Institutes of Health and the State of Maine reporting regulations for the National Cancer Data Base.

The PBMC Cancer Registry started collecting data 1988 and contains data for 6130 cases; 305 new cases were entered in 2007. Today, cancer registration gives the methodology for collection of information about the occurrence of cancer. The data collected includes demographics, the type of tumor, extent of disease at diagnosis, types of treatment received, and the outcomes of treatment. Also, the registry collects limited information on patient's seen in consultation, but who do not receive treatment.

The cancer registry system tracks all analytic cases for the lifetime of the patient to provide statistical information on survival, recurrence, and additional treatment.

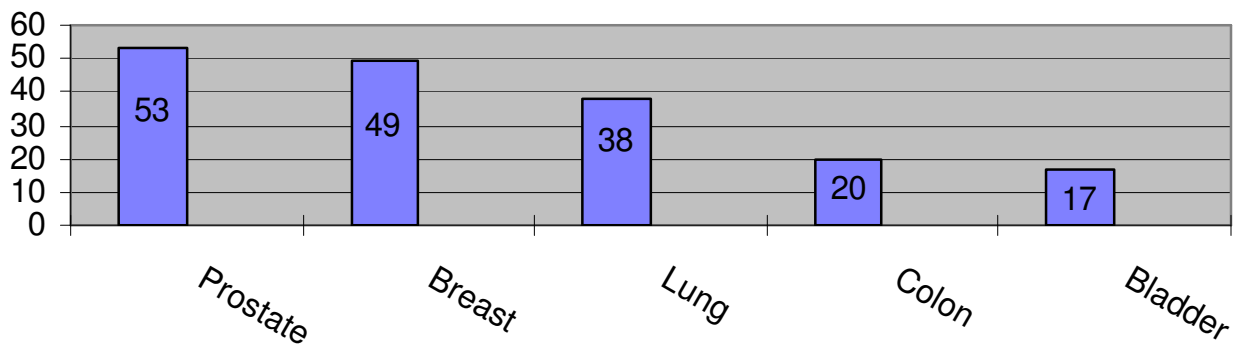

A multidisciplinary committee holds tumor conferences at PBMC on a monthly basis. Representatives from pathology, radiology, medical oncology, radiation oncology, surgery, and other specialties contribute to this forum. Conferees review all major cancer sites treated at the hospital to discuss the diagnosis and treatment options that would be beneficial to our cancer patients. In addition, we also discuss AJCC staging along with NCCN treatment guidelines.

The American College of Surgeons accredits the PBMC cancer program.

2007 Primary Site Listing

Primary Site	Total (%)	Male	Female	Analy	NA
Other Tongue	1 (0.3%)	0	1	1	0
