3 Glen Cove Drive, Suite 3
Rockport, Maine 04856
Phone: (207) 593-5400

Lars Ellison, MD
John Karod, MD
Martin Vickers, MD
Elizabeth Tulip, PA-C

With the recruitment of an additional urologist, Dr. Lars Ellison, Pen Bay Urology now offers a broad spectrum of urological services and the ability to see patients within one week.

Minimally Invasive Surgery

Dr. Lars Ellison has extensive experience in minimally invasive urologic surgery for diseases of the kidney, ureter, bladder and prostate. Laparoscopic surgery is performed through small incisions. Patients undergoing laparoscopic surgery recover quickly. This allows them to return to their usual lifestyle sooner than with more traditional surgical approaches.

Cryosurgery for Prostate Cancer and Other Conditions

Dr. Martin Vickers offers cryoablation of prostate cancer. This minimally invasive technique provides primary treatment for all grades of localized prostate cancer, and offers a curative option for patients with high medical risks and for patients with recurrent localized prostate cancer, status post radiation therapy. It is an option for patients who wish to preserve potency and quality of life and avoid blood transfusions.

Incontinence Center

The Incontinence Center offers complete evaluation of male and female incontinence, including office urodynamics laboratory and endoscopy. A comprehensive range of therapy is available, including medical therapy, physical therapy and minimally invasive surgical treatment for all voiding disorders and incontinence.

Minimally Invasive Stone Removal

We offer comprehensive minimally invasive treatment of all urinary stone disease. This includes Holmium Laser stone treatment, percutaneous stone treatment, and medical therapy for acute and chronic urinary stone conditions. Our laser is on site and we can offer immediate treatment to patients with renal colic, if indicated. Extracorporeal shock wave lithotripsy is also available.
